

# Operating Systems and Distributed Systems

2021

# Welcome

## People:

- Leon Bonde Larsen (Lecturer)
  - Ahmad Rzgar Hamid (Lecturer)
  - Mikkel Brinchs Larsen (Instructor)
  - Oliver Lind Nordestgaard (Instructor)
  - Hala Rahim Fadhel Al-Janabi (Instructor)
  - Mads Møller Hansen (Instructor)
  - Amalie Sander Jensen (Instructor)
  - Patrick Hansen (Instructor)
-

# Course contents

You will learn:

- what the OS does for you
    - scheduling
    - memory
    - storage
  - how network and the internet works
    - protocols
    - security
    - distributed systems
  - to use linux and the command line
  - to build cloud native solutions
-

# Philosophy

- Do practical work in class
- Read at home
- Discuss in study groups

It is all about what YOU do!

# Structure

- Basic lecture (Thursday 13:00-13:45)
    - Basic topic
  - Lab exercises (Thursday 14:00-15:45)
    - In study groups
    - With instructors and teachers
  - Advanced lecture (Thursday 16:00-16:45)
    - Advanced stuff
    - Inspiration
    - Future directions
-

# Materials

- No book
- All materials in english
- Laptop
- Ethernet port
- Know your machine

# Study groups

- Why study groups?
  - Practical work
  - Discussions
  - Motivation

# Study technique

- Time

# Schedule

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
8-10							
10-12							
12-14							
14-16							
16-18							
18-20							

# Schedule

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
8-10				DES			
10-12	PRO						
12-14	PRO	CCM	OPN	DES			
14-16	PRO	CCM	OPN				
16-18							
18-20							

# Schedule

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
8-10				DES			Netflix
10-12	PRO						Netflix
12-14	PRO	CCM	OPN	DES			Netflix
14-16	PRO	CCM	OPN				Netflix
16-18					Bar	Party	Netflix
18-20	Karate		Karate		Bar	Party	Netflix

# Schedule

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
8-10	Read	Read	Read	DES	PRO		Netflix
10-12	PRO			Labs	PRO		Netflix
12-14	PRO	CCM	OPN	DES	PRO		Netflix
14-16	PRO	CCM	OPN		PRO		Netflix
16-18		Labs		Labs	Bar	Party	Netflix
18-20	Karate	Labs	Karate	Labs	Bar	Party	Netflix

# Schedule

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
8-10		Read	Read	DES	PRO		Netflix
10-12	PRO	Read	Read	Labs	PRO		Netflix
12-14	PRO	CCM	OPN	DES	PRO		Netflix
14-16	PRO	CCM	OPN	Labs	PRO		Netflix
16-18	Labs	Labs	Labs		Bar	Party	Netflix
18-20	Karate		Karate		Bar	Party	Netflix

# Schedule

Work done = Time spent x Focus

# Exam

- Take home assignment - individual - pass/fail
- Written exam - 2 hours - multiple choice - grade

# Multiple answer

What is the purpose of the DNS protocol?

- A. Connect machines on the data link layer
- B. Associate domain names with various information
- C. Assign IP addresses to hosts in a network
- D. Access distributed file system information

# Multiple answer

# Lecture plan

## General Course Information

### Description

This topic contains general information about the course.

For student guides and information regarding itslearning, mitsdu and digital exams, please follow [this link](#).

▼ 2 plans

## Introduction

### Description

Introduction to the course, containers (Docker) and Container Orchestration (Kubernetes).

▼ 2 plans - from 01-09-2021 to 02-09-2021

## Linux

### Description

Introduction to the Linux Operating System, Scalable Systems and Network Models.

▼ 2 plans - from 02-09-2021 to 09-09-2021

# Summary

- Lectures and labs on Thursdays
  - Be in control of your machine
  - Make use of your study groups
  - Develop good study habits (schedule + focus)
  - Easy take home assignment (if you complete all labs)
  - Written exam with lots of kahoot practise
  - Check out the plan on itslearning
-

# Introduction to containers

Leon Bonde Larsen et al.

# Server

# Server

# Server

# Server

# Server

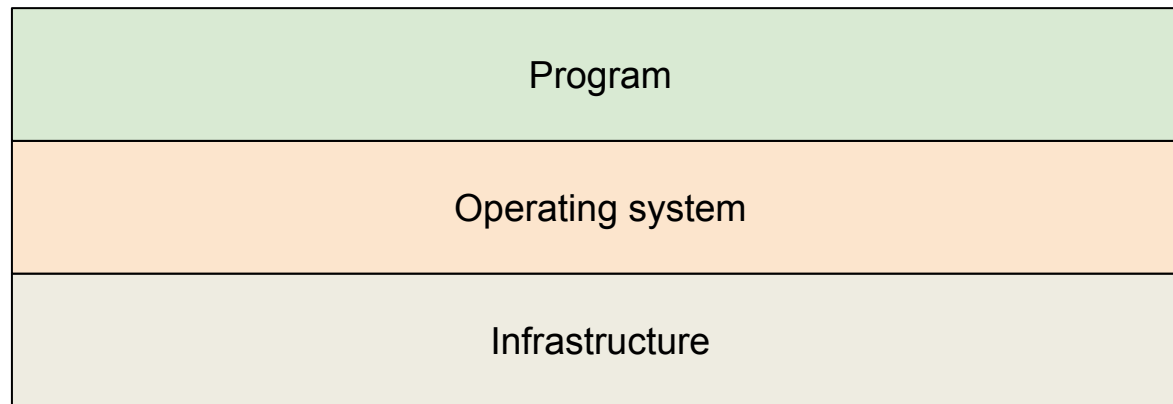

Infrastructure

A diagram consisting of a single horizontal rectangular box with a black border, centered on the page. The box is filled with a light beige color and contains the word 'Infrastructure' in a black, sans-serif font. Below the box, there is a short, thick, dark blue horizontal line.

Containers

# Concepts

- Containers
- Images
- Dockerfile
- Docker registry
- Data volumes
- Network

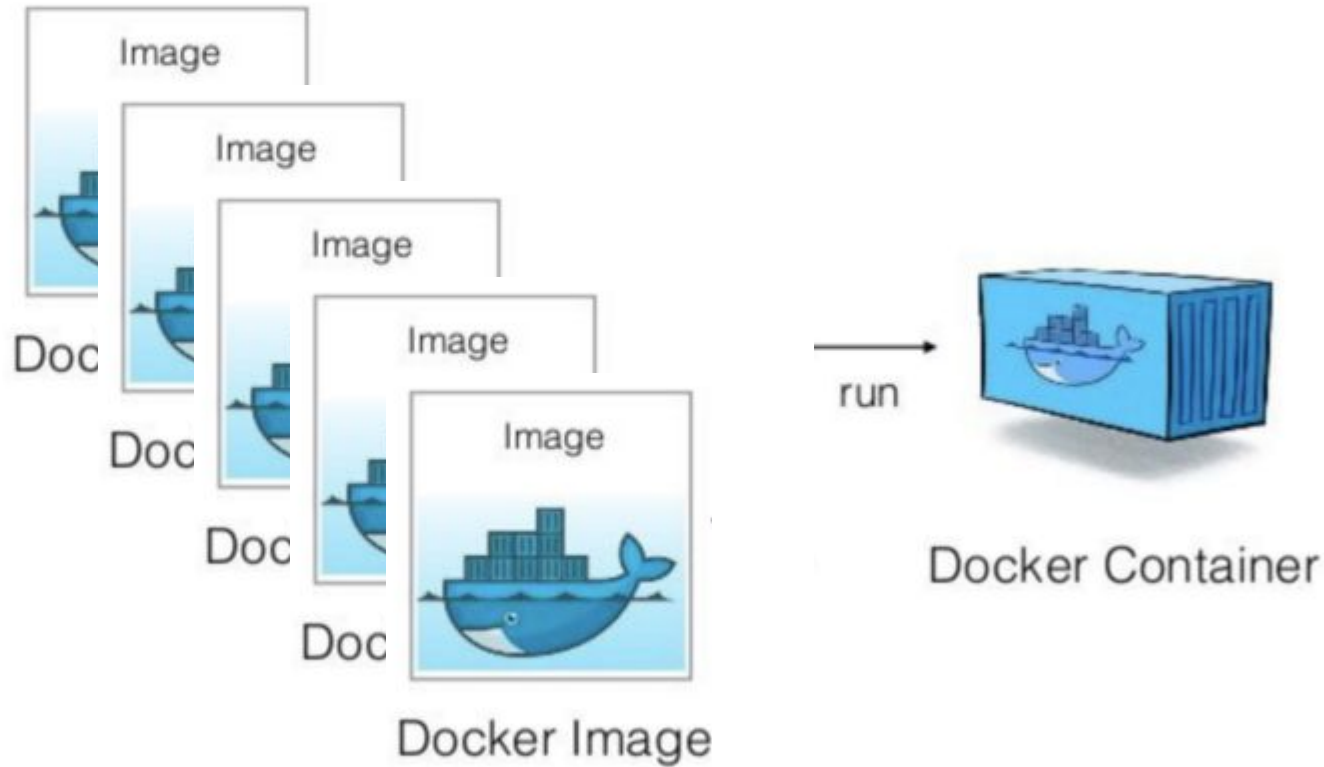

# Docker - Images

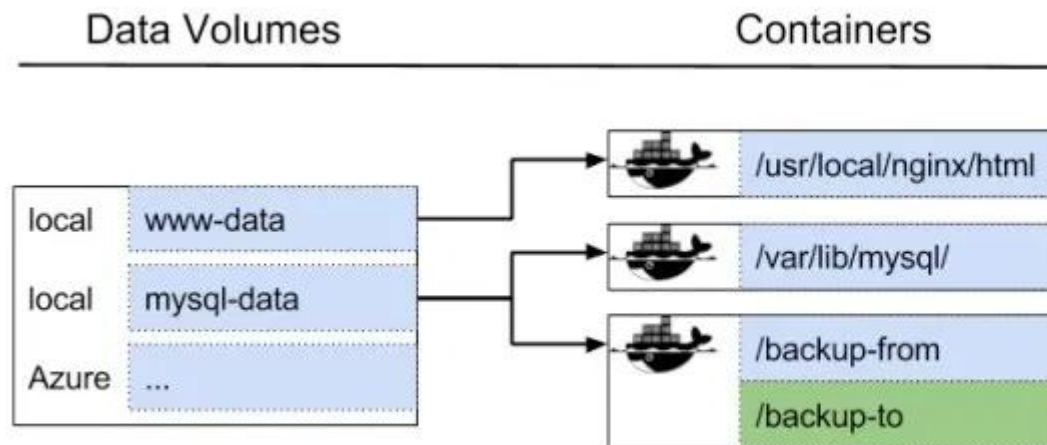

# Docker - Dockerfile

# Docker - Docker registry

# Docker - Data volumes

# Docker - network

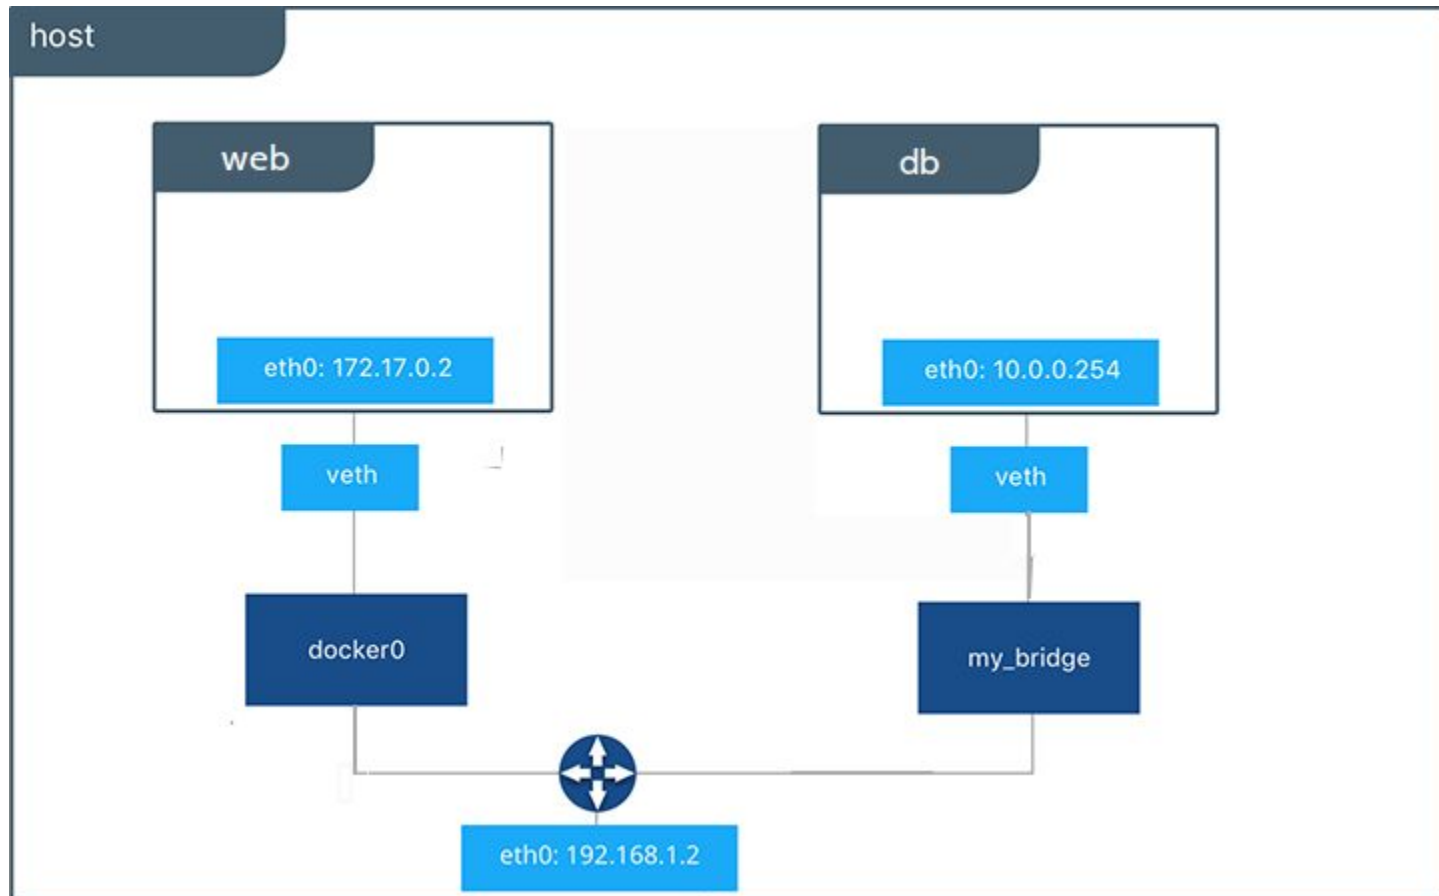

# Docker - network

# Docker - network

# Docker commands

\$ docker run	# run container
\$ docker pull <image>	# download image
\$ docker build -t <username/imagename> .	# build image
\$ docker start <containername>	# start container
\$ docker stop <containername>	# stop container

---

# Diskussion

## MONOLITHIC ARCHITECTURE

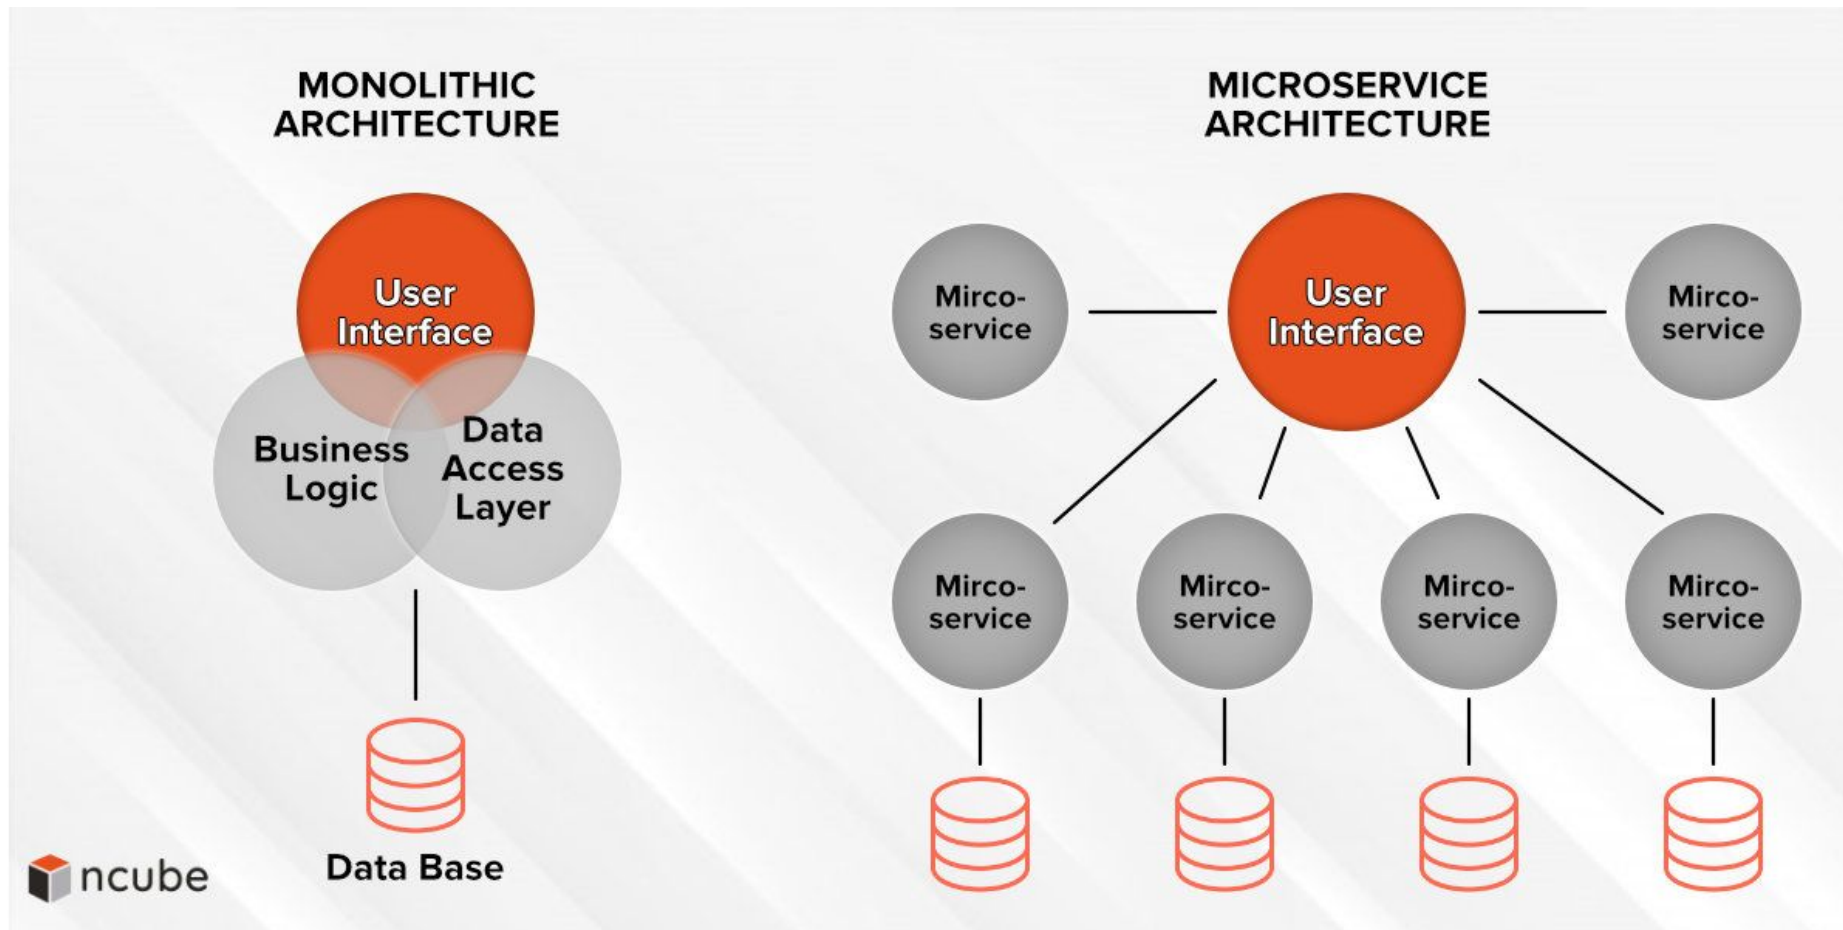

## MICROSERVICE ARCHITECTURE

# Diskussion

- Hvad kunne være fordele/ulemper ved microservice arkitektur?

# Go to group rooms

Room A : U165 : Mikkel

Room B : U166 : Oliver

Room C : U167 : Hala og Mads

Room D : U171 : Amalie

Room E : U172 : Lasse

Room F : U176 : Patrick

- Work on Lab 1
  - Go back at 15:45 and be ready here at 16:00
  - Have fun!
-

# Advanced lecture Kubernetes

Ahmad Rzgar Hamid et al.

## Kubernetes

- Kubectl
- Manifest files
- Nodes
- Pods
  - Containers
    - Evt. side-car pattern
- Services
  - Clusterip
  - Nodeport
  - LB
- Deployments
  - Stateful deployments
  - Cron jobs
  - etc
- Storage
- (Logging?)
- Overview of components
  - Controllers
  - API servers
  - Schedulers
  - ETCD
  - Kubelet
  - Kube-proxy
  - cloud-manager
- Semester project system
  - Ingress controller (nginx)
  - Nginx frontend LB
- Evt. Opsummering af containers samt k8s ?

# Containers in Production

- Containers propose several advantages
  - Isolation
  - Portable
  - Maintainable
  - Deployable
- Is that good enough in a Production Environment?

# Single Machine Setup

How to handle a dead application or container?

# Single Machine Setup

How to handle a dead application or container?

# Single Machine Setup

How to handle a dead host machine?

# Single Machine Setup

How to handle a dead host machine?

# Single Machine Setup

How to handle a dead host machine?

# Single Machine Setup

How to handle a full host machine, with no free resources?

# Multi Machine Setup

# Multi Machine Setup

# What is Missing?

- Scalability
  - Availability
  - Reliability
  - Recoverability
  - Robustness
-

# Container Orchestration

- Program that manages
  - Configuration
  - Coordination
  - Container Life Cycle
- Consist of a Cluster all running a Container Runtime (Read: Docker)\*

# Container Orchestration

Container orchestrator

Container  
Runtime

Host OS

Host #1

Container  
Runtime

Host OS

Host #2

Container  
Runtime

Host #4

# Container Orchestration

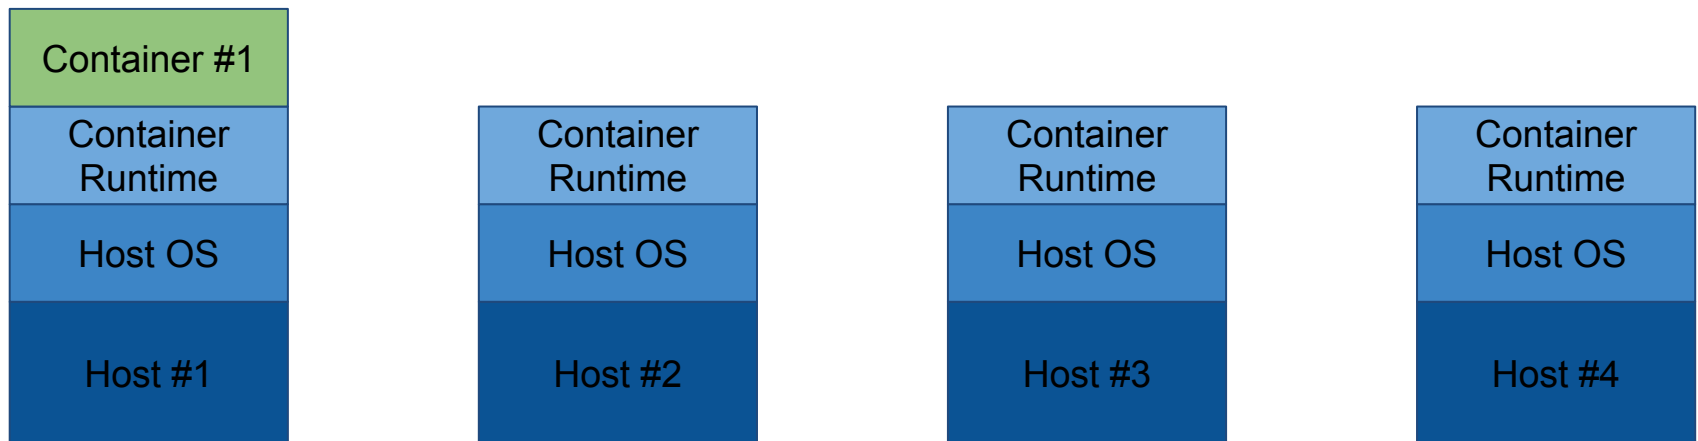

# Container Orchestration

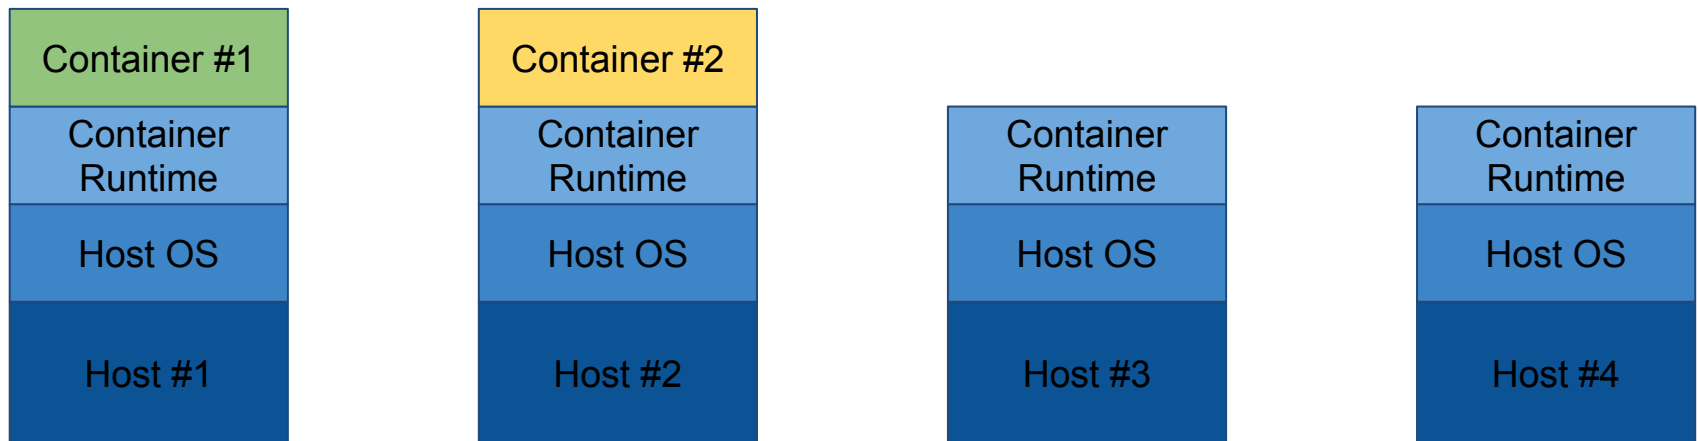

# Container Orchestration

Container orchestrator

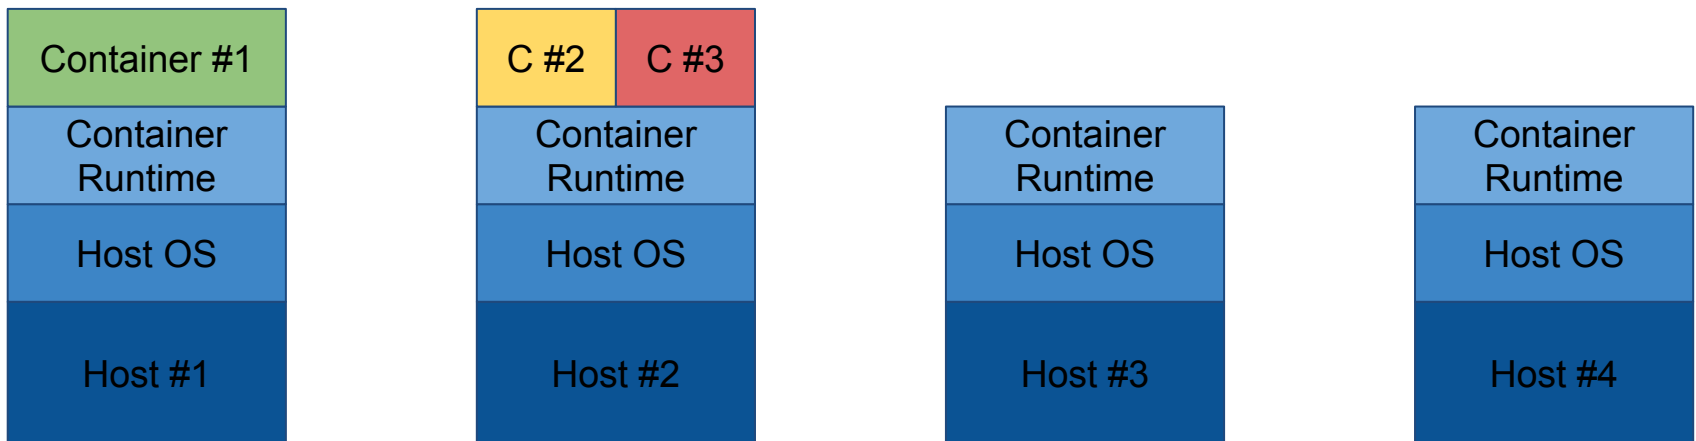

# Container Orchestration

Container orchestrator

# Container Orchestration

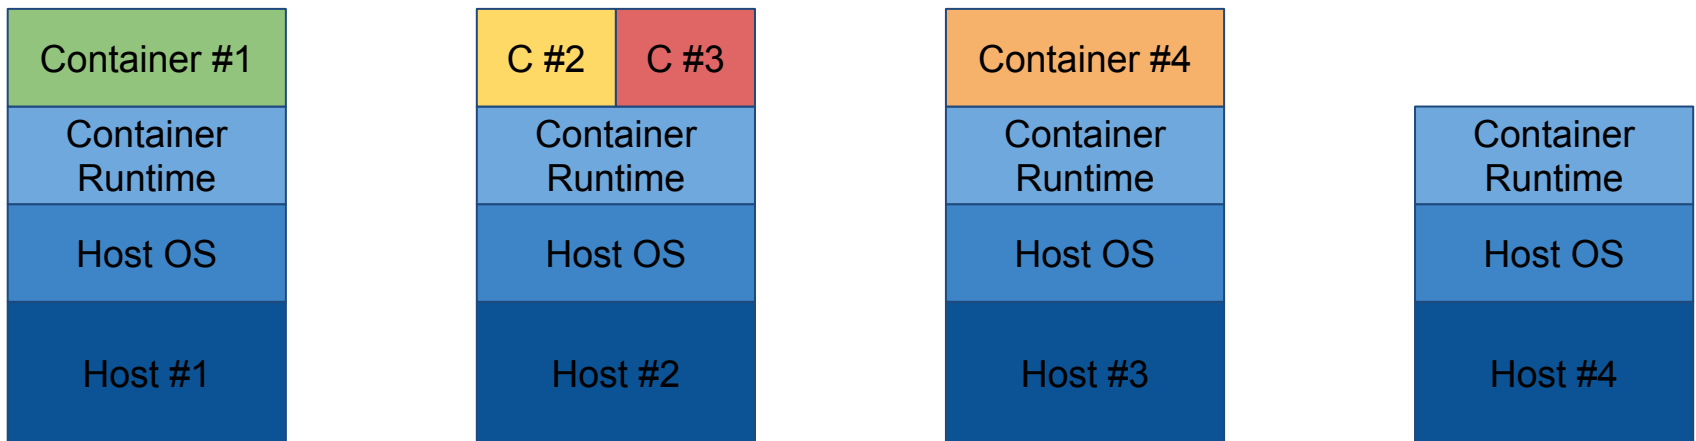

Container orchestrator

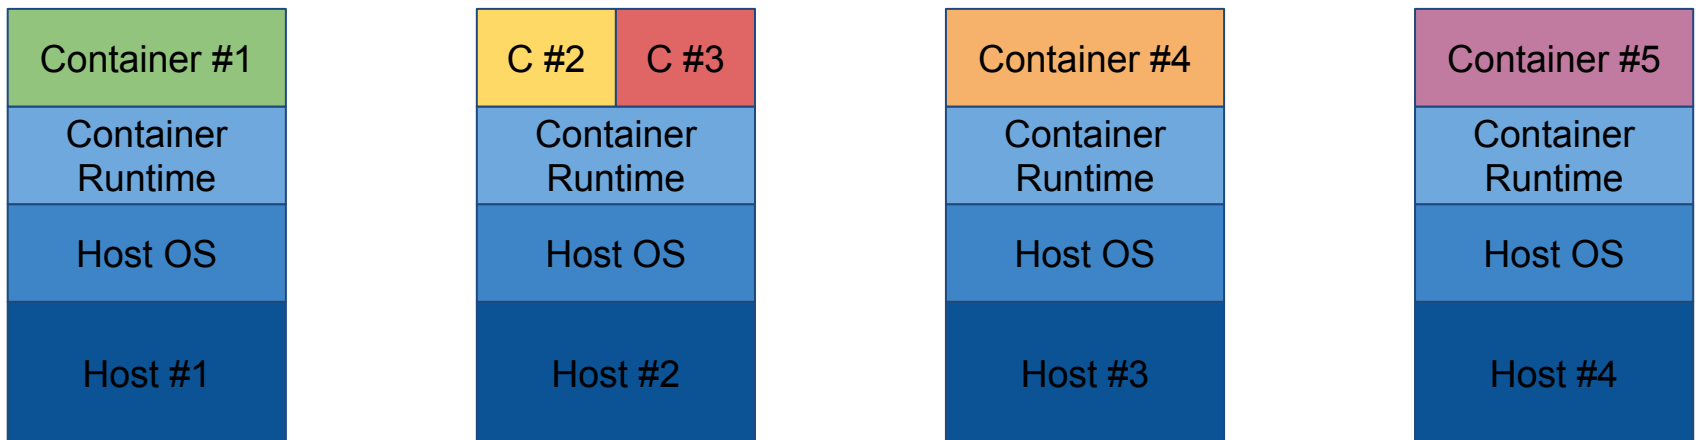

# Container Orchestration

Container orchestrator

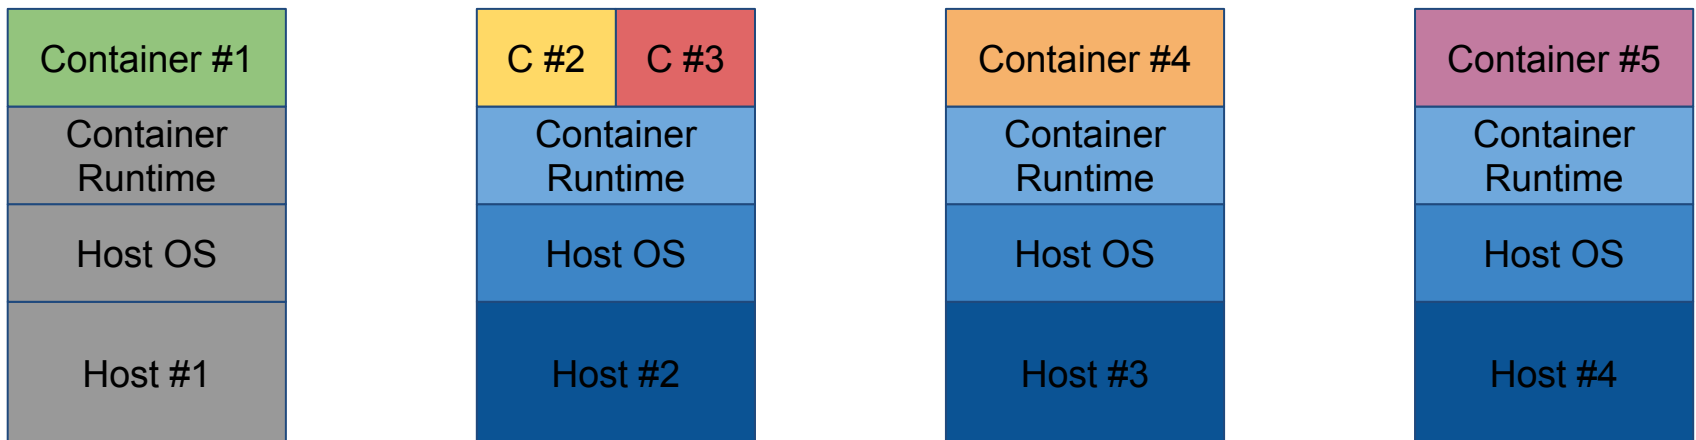

# Container Orchestration

Container orchestrator

# Container Orchestration

Container orchestrator

# Container Orchestration

# Container Orchestration

# Kubernetes

A platform for managing containerised workloads and services.  
Runs a Container Runtime (Read: Docker)\* underneath.

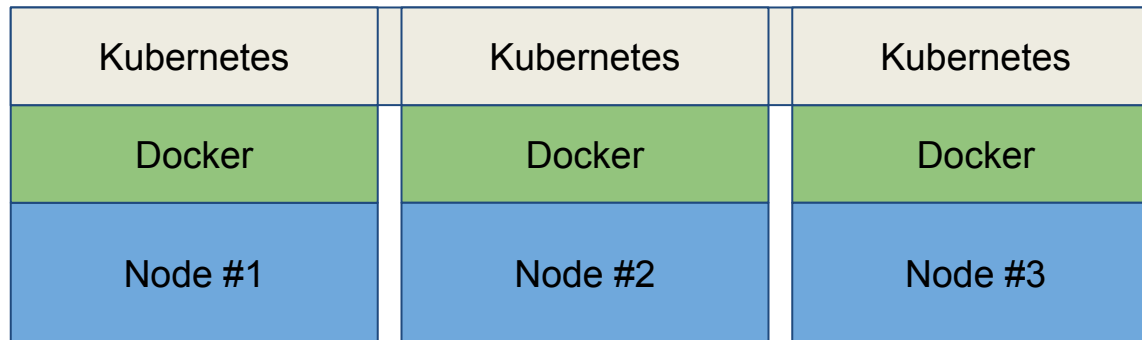

- Scalability
  - Availability
  - Reliability
  - Recoverability
  - Robustness
-

# Kubernetes: Under the Hood

# Kubernetes Nodes

A worker machine in the Kubernetes cluster.

# Kubernetes Resources

Pods

Deployments

Services

# Kubernetes Resources: Pods

Smallest deployable units.

Wrapper around container(s).

Popular model: “One-container-per-Pod”

Sidecar pattern.

# Kubernetes Resources: Deployments

Resource that manages a replicated application, a Pod.

Each replica is represented by a Pod.

Distributes Pods among the cluster nodes.

# Kubernetes Resources: Services

Way to expose an application running on a set of Pods as a network service.

Makes sure that network traffic can be directed to the current set of Pods for the workload.

# Kubernetes Resources: Services

## ClusterIP

Exposes the Service on a internal IP.

Makes the service reachable from within the cluster.

## NodePort

Kubernetes allocates a port in the 30.000 - 32.767 range.

Each node proxies the (same) port into the Service.

# Kubernetes Resources: Services

## LoadBalancer

External load balancers that balance load between replicas.

## Ingress

Not a Service type. Works with the “ClusterIP”-type.

Points to internal controllers that exposes the service.

# Kubernetes Manifests

YAML or JSON files, defining creation, modification and deletion of Kubernetes resources.

# Kubernetes Manifests: Deployment

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: nginx-deployment
spec:
  selector:
    matchLabels:
      app: nginx
  replicas: 2
  template:
    metadata:
      labels:
        app: nginx
    spec:
      containers:
      - name: nginx
        image: nginx:1.14.2
        ports:
        - containerPort: 80
```

---

# Kubernetes Manifests: Service

```
apiVersion: v1
kind: Service
metadata:
  name: nginx-service
spec:
  type: NodePort
  selector:
    app: nginx
  ports:
    - port: 80
      targetPort: 80
      nodePort: 30007
```

# Kubectl

```
$ kubectl create -f [FILE]
```

```
$ kubectl apply -f [FILE]
```

```
$ kubectl delete -f [FILE]
```

```
$ kubectl get [RESOURCE] [NAME]
```

```
$ kubectl describe [RESOURCE] [NAME]
```

```
$ kubectl exec --stdin --tty [NAME] -- [COMMAND]
```

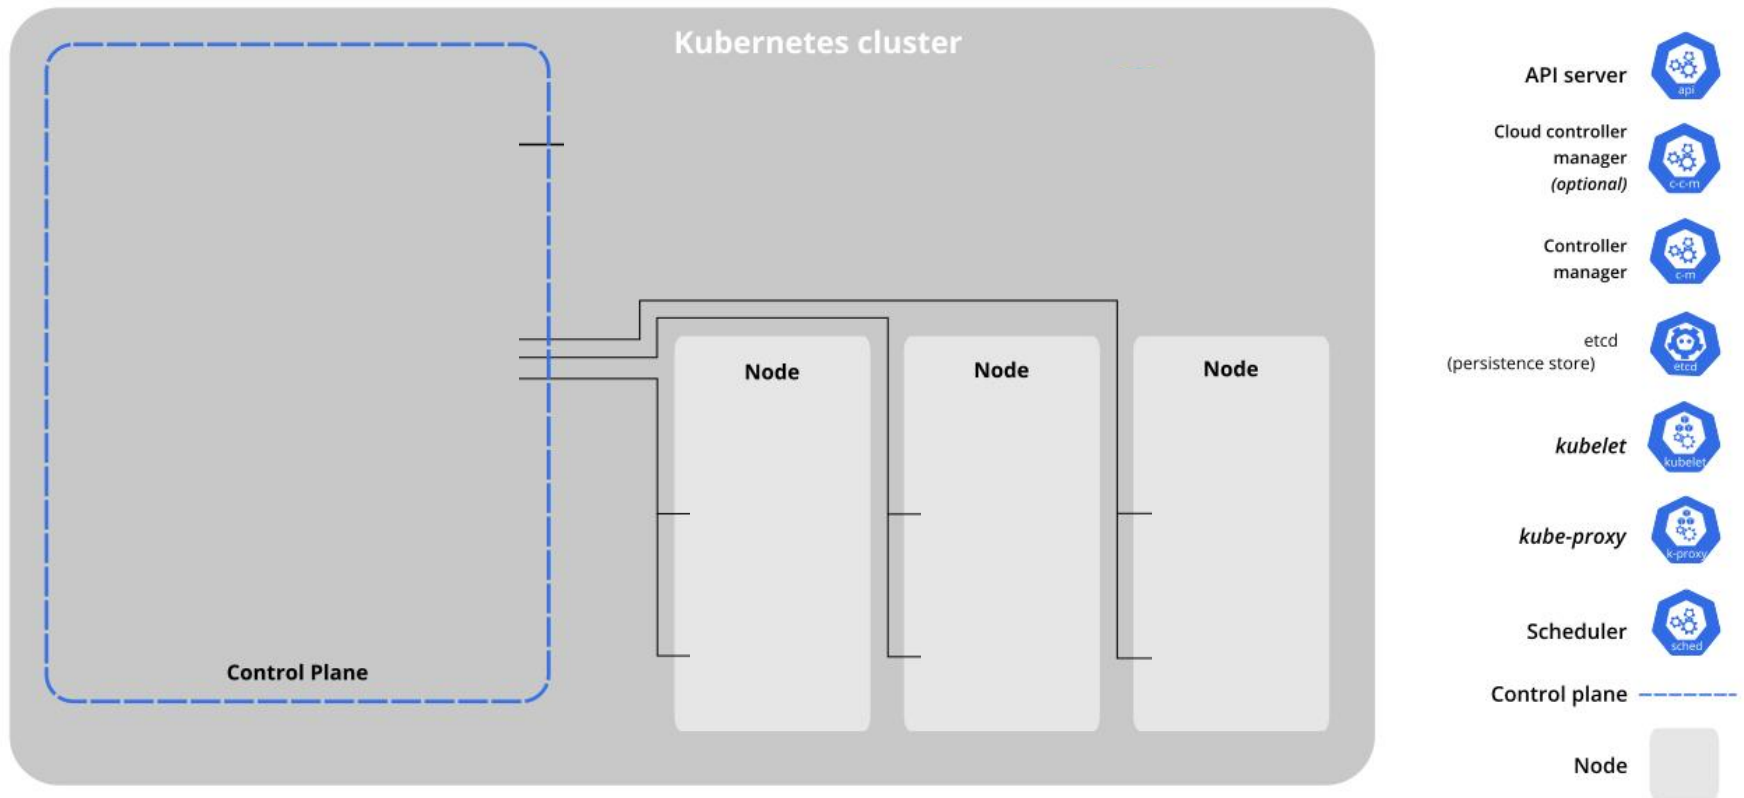

---
